

Everyday legal problems go unsolved because the first step is too hard

REFUND

Faulty product

The shop refuses to return the money.

WAGES

Unpaid salary

The employer delays or withholds pay.

FRAUD

Loan in my name

Fraudsters took out a loan on someone else's documents.

FINE

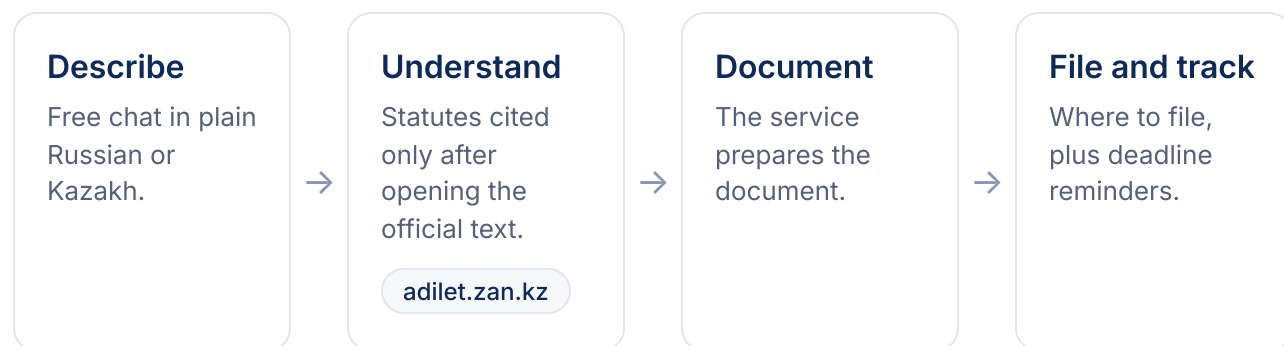

Traffic fine

A fine the driver believes is wrong.

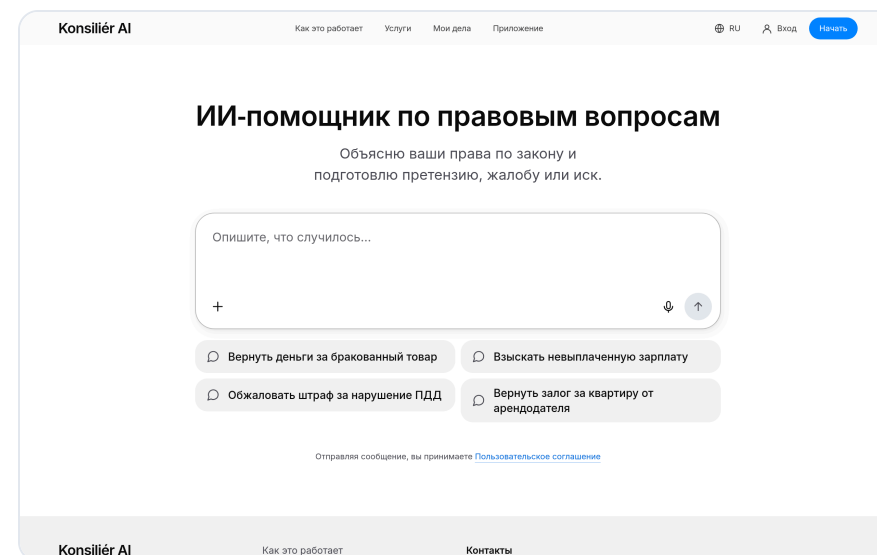

- A lawyer is often too expensive for a small claim, so many people do nothing.
- Those who try do not know what to write, where to file it or by what deadline.
- Generic chatbots answer confidently but can cite laws that do not exist or no longer apply.

Konsiliér AI: understand your situation, then act

An AI assistant for everyday legal questions. It explains, prepares and reminds; it does not promise an outcome.

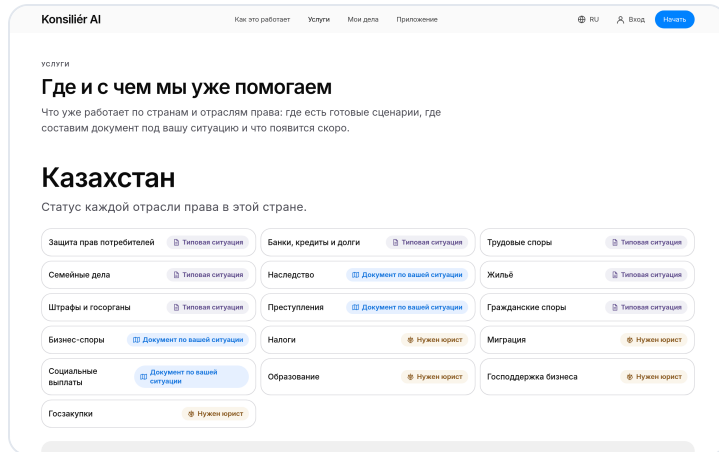

- The AI cites a statute only after it opens the official text on adilet.zan.kz, and it shows the link.
- The person files the document online (eOtinish, court e-filing, the agency's site); the app tracks the deadline.

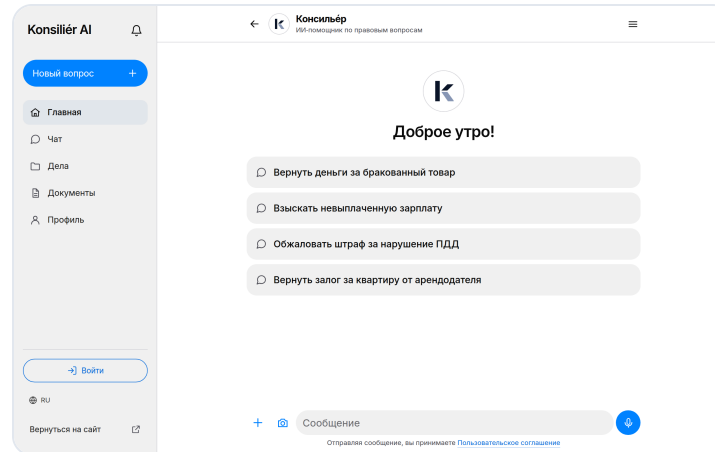

Home page, production build, September 2026

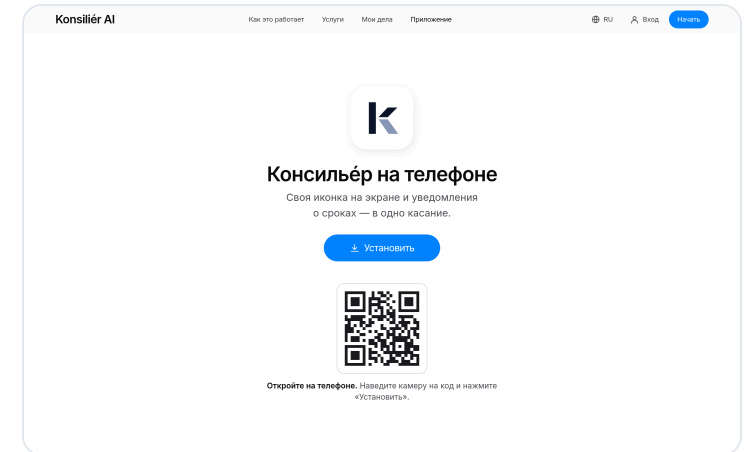

What works today

Services: Kazakhstan coverage by area of law

Web app: start a question in the AI chat

Phone app (PWA) with deadline notifications

- **Free AI chat** with a daily message limit, on free Google Gemini models. Documents are drafted by Anthropic Claude.
- **Filing guidance and deadline reminders** for each scenario. The user is asked to check the details before filing.
- **Upload instead of typing:** the service reads PDFs, photos and DOCX files and asks only for what is missing.
- **20 Kazakhstan scenarios**, each carried through to a finished document: refunds, unpaid wages, credit fraud, fine appeals, child support and more.
- **Telegram bot** that takes a case step by step in Russian and Kazakh.
- **Interface in five languages:** Russian, Kazakh, English, Turkish and Arabic.

Kazakhstan first: a country that is already online

20.5M

Population on 1 January 2026

Bureau of National Statistics of Kazakhstan

19.5M

Internet users, 93.4% penetration, end of 2025

DataReportal, Digital 2026: Kazakhstan

16.9M

Social media user identities, October 2025

DataReportal, Digital 2026: Kazakhstan

- Acquisition runs on organic social media and a referral programme. Russian and Kazakh are covered from day one.
- Next: the engine is country-agnostic, with data packs per country. 13 countries are planned (Central Asia, the Caucasus, Turkey, the Gulf, North Africa); **none of them is live yet.**

Free to understand, paid to act

FREE

AI chat

Chat with the AI assistant, with a daily message limit.

PER DOCUMENT

KZT 1,990

A fixed price per document in all 20 Kazakhstan scenarios. The document is created after payment.

FULL CASE

KZT 9,990

Every document one case needs, in a single purchase.

- Payment today: Kaspi transfer, confirmed by the operator. Referral: after a friend's first payment, both get one free document.
- No revenue forecast in this deck: the product launched on 28 September 2026.

Launched on 28 September 2026: day one

We have only just started. No paying customers yet.

Before launch	20 Kazakhstan scenarios carried through to a finished document, statute checks against the official portal.
28.09.2026	Product live: web app, PWA and Telegram bot.
29.09.2026	TOO «Konsilier AI» registered in Almaty, BIN 260940036818.
Next 30 days	Growth through a referral programme and organic social media, with a marketing budget of KZT 0.

A lean team, with AI in both the product and the operations

Nurlan Khabibulla

Founder & CTO · background in law, business and management; built the product end to end

Saltanat Tulegenova

CEO · lawyer, student

TOO «Konsilier AI», registered 29.09.2026 in Almaty, Kazakhstan · BIN 260940036818
External funding raised: none

OPERATIONS: SIX AI AGENT ROLES

Project manager

Marketing

Content

Client support

Documentation

Finance

Each role reports to the founders twice a day. The founders approve every spend, publication and outbound message.

What we are asking for

NVIDIA INCEPTION

Cloud credits to test self-hosted open models on NVIDIA GPUs for three steps: redacting personal data in Russian and Kazakh, routing messages to the right scenario, and statute search. DLI training for the team.

GOOGLE FOR STARTUPS

Cloud credits for Gemini: the chat runs on the free Gemini tier today, which caps how many people we can serve.

AWS ACTIVATE

Credits for Claude on Amazon Bedrock (the provider layer already supports it). Document drafting on Claude is capped today at USD 3 a day.

- Why it matters: by our estimate the free model tier handles only a few hundred active users per day, while our month-one goal is 100,000 users.
